My idea:-

Developing a one of the biggest open source learning platform which can help students to learn and to conduct a digital internship which can help students to get hands on on the technical skills and also to sharpen their skill which may provide a good carrier in future and helps them to enhance the technology and it's usage and to collaborate the platform with the one of the best companies so that students can have their hands on on the projects without investing money for the

Internship in the companies and they can have their future bright as in the competitive world it will create to encourage them .

My idea contributions:-

It will lead a one of the best technical experts to the industry it will help in empouring the educations and it is more usefull for the students who cant afford to study the paid courses such as analytic robotics.

Mission fulliment:-

It will be apportunity for the students in self learning and teaching as well all know knowledge spreads by sharing
